

**Series C18-DD-TC**

## **DIRECT DRIVE PRECISION LABORATORY CENTRIFUGE**

The direct drive series C18-DD centrifuge is A high accuracy laboratory centrifuge designed for the test and calibration of precision accelerometers and small electromechanical devices.

This series makes use of AC brushless motor technology that allows for long life maintenance free operation.

The direct drive technology combined with the new generation of all digital **AXIDYN ND** control system delivers large servo bandwidth and high dynamic response. It also does minimize maintenance cost.

Several models and options are available:

- Customized electrical slip-rings
- Optical fiber rotary joint and modems
- Fluid rotary joints

The new generation of control system **AXIDYN ND** includes the following operating modes: DC linear acceleration and sinusoidal g profiles.

In addition it can also operate as a digital rate table and a precision positioning simulator.

Optional remote interfaces available are:

- Ethernet
- IEEE 488
- Reflected memory interface Real time Bus
- RS232 / RS422
- I/O analog input/output

Based upon its 30 years of experience, **ACTIDYN SYSTEMES** team of engineers has designed a family of high performance simulators, which combines quality and high performances at low cost that
